

S Fusion successfully removes submicron particles generated in neat oil applications by combining a hi-tech synthetic self-draining media filter with Filtermist’s proven centrifugal technology - offering an effective alternative to other products in the high-pressure coolant market.

- Compact**
Machine mounted to free up valuable floor space.
- Cost effective**
Lower initial outlay and running costs than comparable filtration systems.
- Innovative**
Patented venturi suction system returns a large percentage of filtered oil back to the machine, increasing the lifetime of the filter
- Efficient**
Airflow reduced by just 14% in 4000 test hours.
